

ConstructionOne

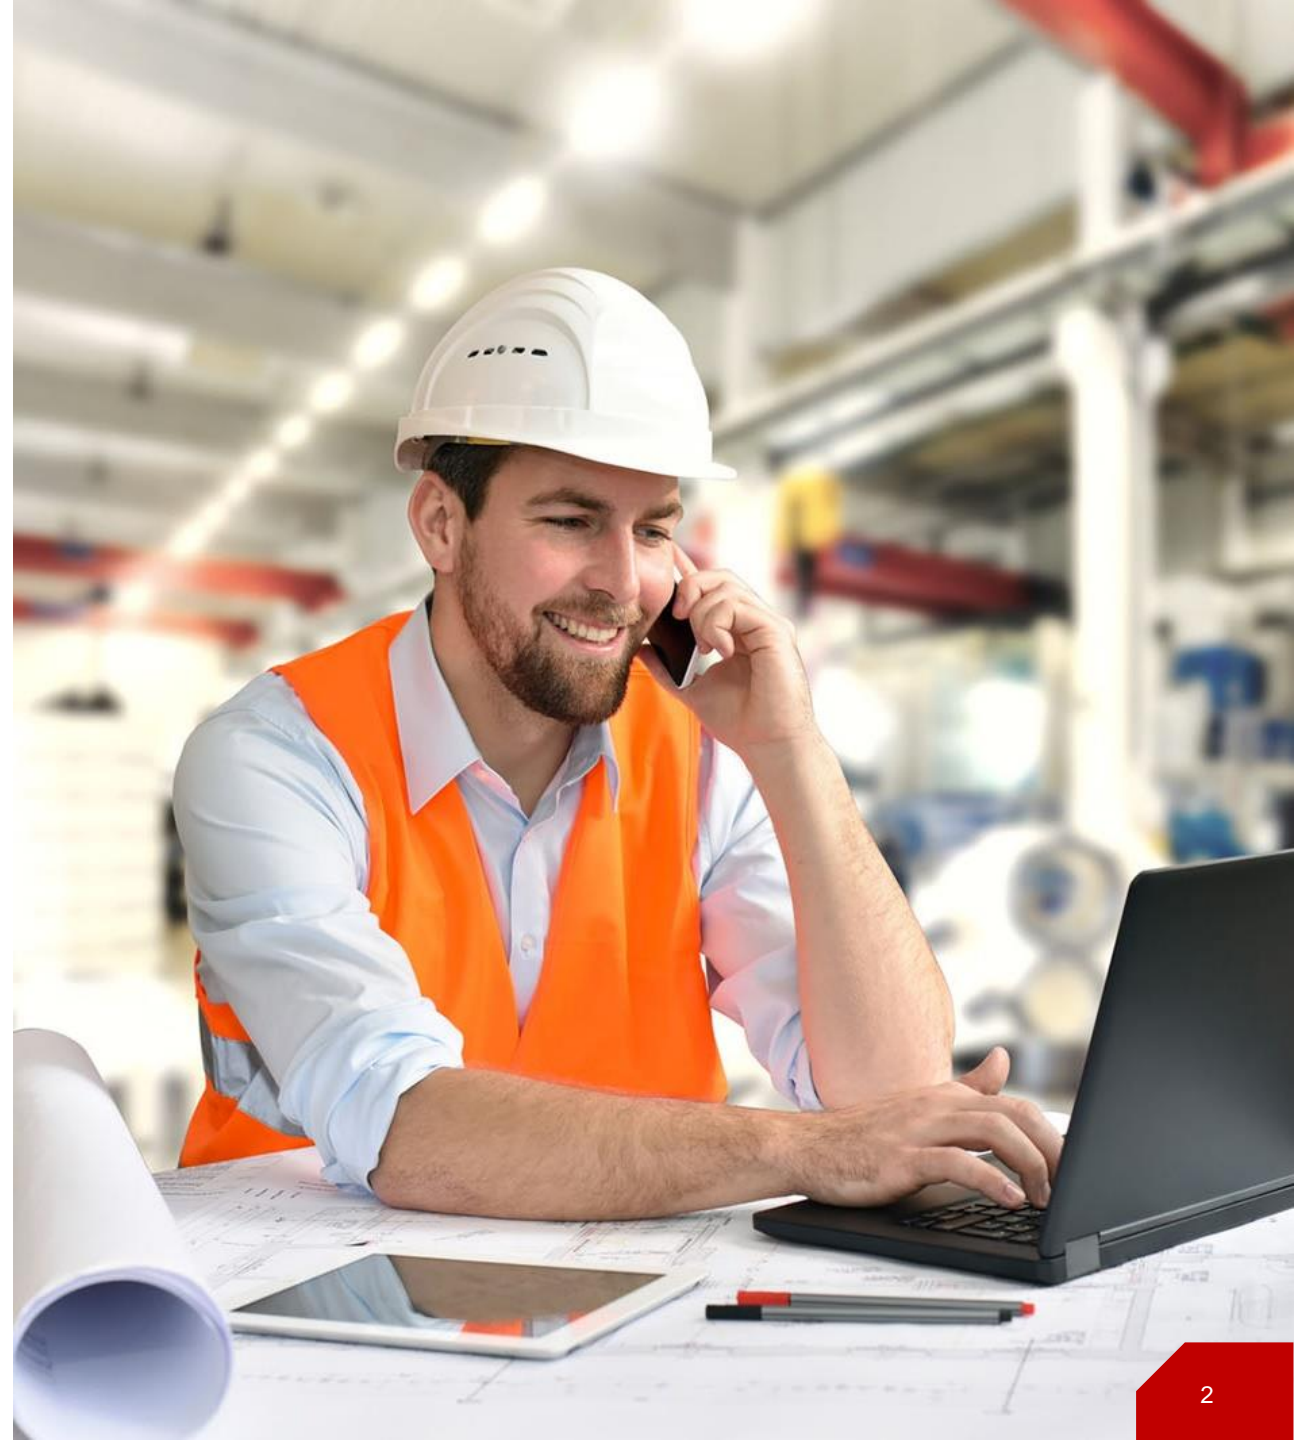

The Complete Solution for the Construction Industry and Trade

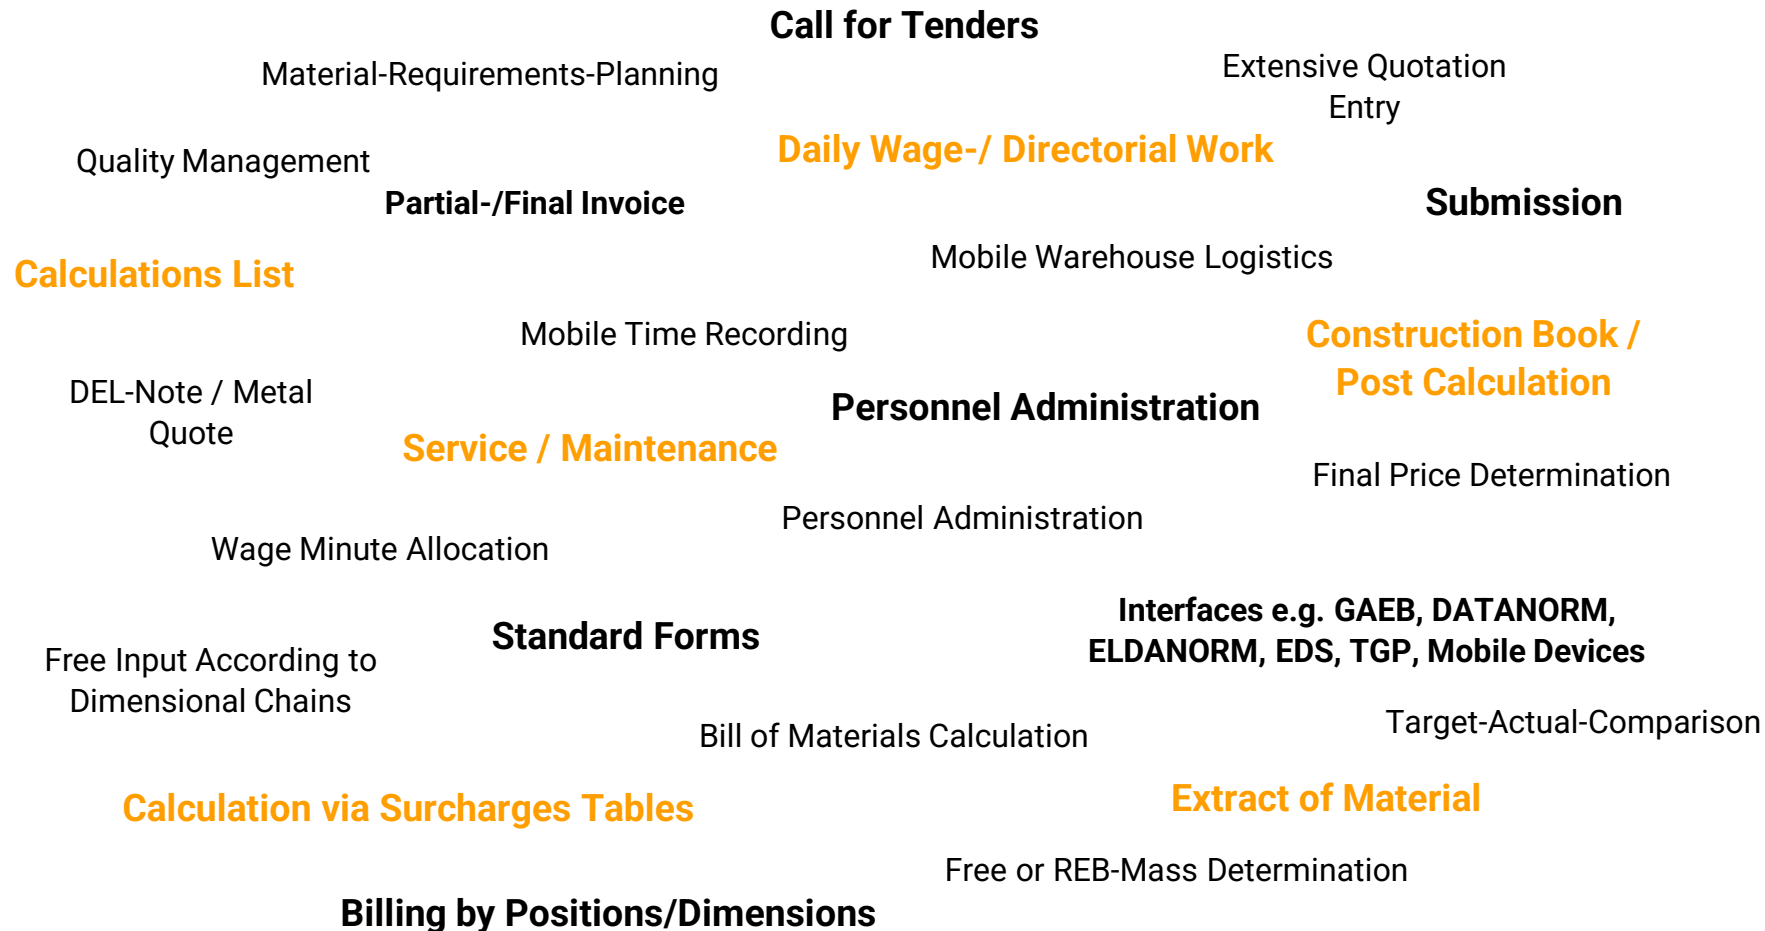

On the Way to the Digital Construction Site

As an entrepreneur in the construction industry, you are exposed to a wide range of challenges. Parallel running projects, short-term changes, quick to delivery calculations, tight deadlines, CAD plans, ongoing telephone calls, technically sophisticated planning, and the coordination of all parties involved are part of everyday life. It is essential to expand the traditional core areas of planning and construction with elements such as financing, marketing, and service.

ConstructionOne accompanies medium and large construction companies throughout the entire construction process and ensures that you can work faster, better, and more comfortably. All business areas such as planning and costing, project management and resources management, yard management, and accounting but also many other business areas such as sales, purchasing, warehousing, and transport are seamlessly linked.

The Highlights of the Industry Solution

Real-time Visibility of Your Company Performance

Having timely and reliable information available to manage construction projects and thus of the company as a whole is crucial for business success. Save time and costs by centrally managing all process steps in one application. Detailed and comprehensive reporting ensures constant transparency. With one click you can evaluate all areas. The consistent provision of project data across all areas of your company creates transparency and freedom for the essential tasks.

- Central project management down to the detail level and graphical planning board
- Transparent project cockpit with access to all information, budget, plan/actual, documents, activities such as purchasing, production, customer interaction and service
- Extensive evaluations such as calculation list, final price determination, extract of material, specification list, standard forms
- Quality management and Quality assurance
- Comprehensive documentation options

Revolutionise Your Customer Interaction

Design your commercial processes digitally and lay the foundation for stable and flexible corporate management. With ConstructionOne you can seamlessly track business opportunities and customer activities. All contact persons for the respective projects are stored directly in the system to enable you to get in touch quickly. Thanks to complete project information, all those involved in the project are able to provide information at any time.

ConstructionOne offers a wide range of functionalities for handling article-related tasks such as article invoicing, service/maintenance, inventory management, and purchasing, as well as for financial and asset accounting and the management of customer and supplier relationships (CRM).

- Integrated CRM-System
- Framework agreements
- Sales control
- Flexible price - and conditional systems for customers and suppliers
- Activity management
- Campaign management
- Extensive offer recording fixed prices, cost groups, bill of materials calculation
- Fully automatic invoicing from quotations or measurements

Construction Costs Firmly in View

ConstructionOne provides you with all the tools you need to calculate and edit bills of quantities (GAEB-Joint Committee for Electronics in Construction) as required in the construction and finishing trades. This includes in particular object costing, offer processing, determination of measurements, construction accounting, and object-related target/actual comparison. In addition, the solution supports you in the calculation of measurements, device management, post-calculation, and numerous other areas such as daily wage billing.

- Material requirements planning
- Actual cost Accounting
- Free or REB-mass calculation with extensive formula collection
- Various calculation types in minutes and hours; via Bills of material lists, overhead tables with overhead costs, general business costs, contribution margin accounting,...
- Free structure of forms
- Final price calculation
- Billing document according to items/measurement sheets
- Partial- / Final invoice
- Construction book/ Post calculation

From the Invoice to the Receipt of Payment

Punctual invoicing, thus ensures better liquidity in the construction company and cost transparency for the client. With clear, standard-compliant invoices, you ensure transparency for the client and get your money faster. Simplify your processes from invoicing to receipt of payment with fast revenue management and more financial control, which ConstructionOne offers.

- Settlement by increment or cumulative
- Tabular recording of invoice quantities even without quantity approach
- Any surcharges/surcharges on gross and net totals of the invoice
- Quantity and cost overview per item, by title and over the entire construction project
- Order-related overview of all created invoices
- Warning when order quantities are exceeded

Simple Stock Management and Logistics

ConstructionOne provides you with reliable information on deliveries, stocks, and item locations at all times. Thanks to a user-friendly interface, you can manage even extensive data smoothly and easily. You can view your stock values using standard cost, moving average, FIFO, and other methods. The solution allows you to check your stock and item availability in real-time, but also to manage standard and special prices. Track stock movements and keep track of where your goods are at all times.

- Shipping / Inventory
- Mobile logistics processes
- Warehouse disposition and picking
- Stock management and optimization
- Pallet and transport container management
- Print function for labels with barcodes

Network/Connect your entire Business

A fully flexible solution tailored to your needs is particularly important for your smooth business operations. This is because companies in the construction industry often require specific interfaces that are tailored to their processes. For example, by integrating your CAD and ERP systems, all important information for production is centrally collected in the ERP system and enables interdepartmental cooperation.

- Interface for editing service specifications (GAEB)
- CAD/PLM Connection
- Connection of DATANORM, DATEV, ELDANORM or 123
- Synchronization with Microsoft Outlook

Customised for your Industry

In order to cover current and specific requirements of your business, the industry solution extends the functional scope of the ERP system SAP Business One by industry-specific functionalities such as regulated, efficient and scalable production processes as well as monitoring and documentation processes.

ConstructionOne offers you real-time tools and industry-standard overviews, as well as comprehensive production control, inventory control, warehouse management, logistics, and much more to run your business efficiently and successfully. From article management and mobile warehousing, to payment processing- with ConstructionOne you can react quickly and flexibly on all sales channels.
